

Exam : EMC E20-520

Title : calriion solutions specialist exam

Update : Demo

1. Which Navisphere Event Monitor model uses an SP agent to monitor only the storage system on which the SP agent resides?

- A. Individual
- B. Enterprise
- C. Distributed
- D. Centralized

Answer: C

2. THB Corporation has a database consisting of one log LUN and four data LUNs. The company plans to mirror the database to two remote locations with MirrorView/S. How should it plan to maintain the consistency of the database?

- A. Create a MirrorView/S consistency group, and ensure that all five mirrors are members of the consistency group
- B. Consistency cannot be maintained with MirrorView/S. They should consider MirrorView/A with consistency groups
- C. Consistency cannot be maintained because MirrorView/S does not support consistency groups with two secondary images
- D. Consistency cannot be maintained because MirrorView/S does not support consistency groups where log LUNs are members

Answer: C

3. What is a valid Navisphere CLI command?

- A. navicli getlun -h 192.168.2.125
- B. navicli -d 192.168.2.125 getlun -rg
- C. navicli -h 192.168.2.125 getlun -rg
- D. java.jar navicli -address 192.168.2.16 metalun -list

Answer: C

4. The CFM Corporation believes its data is going through the wrong switch in the fabric. They put a

protocol analyzer online to capture the output. Where should they look to see if the data is being routed incorrectly?

- A. The fourth byte of the destination WWPN
- B. The eighth byte of the destination WWPN
- C. The first byte of the destination Fibre Channel address
- D. The second byte of the destination Fibre Channel address

Answer: C

5. Which option is selectable in the Create RAID Group dialogue box?

- A. RAID Type
- B. RAID Group ID
- C. Enable Write Cache
- D. Manual Destroy after LUN is unbound

Answer: B

6. What is one way a Snapshot provides a "point-in-time" view of a source LUN?

- A. By writing the new data to the Reserved LUN pool each time it changes
- B. By writing the new data to the Reserved LUN pool the first time it changes
- C. By copying the original data to the Reserved LUN pool the first time it changes
- D. By limiting the number of Snapshots to eight that can be assigned to a LUN at the same time

Answer: C

7. What is an attribute of a Clone Private LUN?

- A. Contains Fracture Logs
- B. Contains Write Intent Logs
- C. Must be the same RAID type as the source LUN
- D. Shared by both storage processors simultaneously

Answer: A

8. The VisualSRM agent installation can be performed locally on each host. What other method can be used for installation?

- A. pkgadd utility
- B. Pull installation
- C. Push installation
- D. At system reboot

Answer: C

9. What is a characteristic of Event Monitor?

- A. Integrated with Navisphere Manager
- B. Loaded as a separately purchased NDU
- C. Monitors for hardware-related events only
- D. Monitors only for Navisphere defined events

Answer: A

10. Which function is disabled when PowerPath is installed without a license key?

- A. Failover
- B. Multipathing
- C. LUNZ functionality
- D. Access to peer SP paths

Answer: B

11. Which feature does the PowerPath GUI provide to users?

- A. Change the failover policy of a LUN
- B. Change the CLARiiON SP from active to standby
- C. Provide the CLARiiON with active-active failover policy
- D. PowerPath is required for a host to connect to a storage group

Answer: A

12. Which feature best describes the PSM LUN on the CX series?

- A. Each SP accesses its own copy
- B. Default size is 2GB on a CX array
- C. Not viewable in Navisphere Manager
- D. Created after array initialization by the user

Answer: C

13. In an Emulex HBA Solaris host Installation, which file is edited to force the host to perform a Fabric login to a switch?

- A. sd.conf
- B. lpfc.conf
- C. lputil.conf
- D. /etc/system

Answer: B

14. What is a feature of Access Logix?

- A. LUN Masking
- B. Controls access to data through file locking
- C. Masks host WWNs via Access Control lists
- D. Restricts one host at a time to accessing one LUN at a time

Answer: A

15. How does a SAN Copy session failover upon SP failure?

- A. Automatically, via PowerPath
- B. Manually, via user intervention
- C. Conditionally, via host intervention
- D. Automatically, via storage system redundancy

Answer: B

16. Which event occurs when starting a new SnapView Snapshot session against a source LUN?

- A. The creation of a session name
- B. The creation of a SnapView Snapshot
- C. The association of a SnapView Snapshot with the session
- D. The copying of production data blocks to the Reserved LUN pool

Answer: A

17. Which combination is supported for a SAN Copy transfer?

- A. SAN Copy/E licensed on a CX200 connected to a CX500 with SAN Copy licensed
- B. SAN Copy/E licensed on a CX300 connected to a CX500 with SAN Copy licensed
- C. SAN Copy/E licensed on a CX500 connected to a CX500 with SAN Copy licensed
- D. SAN Copy/E licensed on a CX500 connected to a CX700 with SAN Copy licensed

Answer: B

18. After completing the CLARiiON SAN attach procedure, the Windows host is not logging into the Storage Processor. What is one condition that can cause the problem?

- A. Improper zoning
- B. Incorrect sd.conf
- C. Did not install Agent
- D. Did not install PowerPath

Answer: A

19. Which feature does the PowerPath CLI provide to users?

- A. Set the failover policy for a LUN
- B. Provide the CLARiiON with active-active failover policy
- C. PowerPath is required for a host to connect to a storage group
- D. Mask any of the LUNs on the storage array connected to the host

Answer: A

20. Which statement best describes the source LUN when using LUN migration?

- A. Can be a private LUN
- B. Cannot be a metaLUN
- C. Can be in the process of binding
- D. Cannot be a component of a metaLUN

Answer: D

21. During an attempt to promote a MirrorView/A Consistency Group a SP failure occurs. You notice one of the primary images is missing its corresponding secondary image. What would you expect the state of the Consistency Group to be?

- A. Consistent
- B. Scrambled
- C. Out-of Sync
- D. Synchronizing

Answer: B

22. Because Windows 2003 SP1 and above creates an MBR on each disk it formats, LUNs must be adjusted to eliminate disk crossings. Which option will accomplish this?

- A. dskpar.exe
- B. diskpart.exe
- C. Modify stripe element size
- D. Make the adjustment when formatting through Disk Manager

Answer: A

23. Which PowerPath policy includes load-balancing?

- A. ClarOpt
- B. Request
- C. Mostblocks
- D. Basic Failover

Answer: A

24. On which device can the Navisphere ManagementServer be installed?

- A. A CX400 Array
- B. An FC4500 Array
- C. A Linux workstation
- D. A Solaris workstation

Answer: A

25. What is a function of the Clone Private LUN?

- A. Keeps track of modified extents of Source LUNs and Clones
- B. Stores host write data from Clone when Clone is fractured from Source LUN
- C. Enable incremental synchronization upon starting an Out-of-Sync Clone LUN
- D. Stores host write data from Source when Clone is fractured from Source LUN

Answer: A

26. Which items can VisualSRM report on?

- A. Mainframe and databases
- B. Databases and filesystems
- C. Tape Libraries and Host internal disk
- D. Tape Libraries and Exchange mailboxes

Answer: B

27. A Windows host is connected to a CX500 array through a SAN. One HBA is zoned to SP A port 0 and SP B port 1. The other HBA is zoned to SP B port 0 and SP A port 1. How many entries for this host should appear in the Connectivity Status window in Navisphere Manager?

- A. 1
- B. 2
- C. 4

D. 8

Answer: C

28. Which statement applies to configuring the Reserved LUN Pool?

- A. LUN IDs of LUNs assigned to an SPs LUN Pool may not exceed 2047 on a CX700
- B. A dedicated Reserved LUN Pool LUN is required for each Source LUN that is snapped
- C. Simulation recovery mode can be used to estimate a suitable Reserved LUN Pool LUN size
- D. Due to automatic LUN assignment, all Reserved LUN Pool LUNs must be the same size and the same RAID type

Answer: B

29. After a consistent Clone fracture, what needs to be done to reverse sync the Clones?

- A. Highlight each Clone individually and select "Reverse Synchronize"
- B. Highlight the Clone in the respective group with the "Ctrl Key" and select "Reverse Synchronize"
- C. Highlight the Clone in the respective group with the "Shift key" and select "Reverse Synchronize"
- D. Highlight each Clone group name of the respective group with the "Ctrl Key" and select "Reverse Synchronize"

Answer: A

30. A MirrorView/A mirror has been configured with the 'Start of Last Update' value set to 15. An update cycle starts at 3:10 pm (15h10) and finishes at 3:20 pm (15h20). When does the next update cycle start?

- A. 3:20 pm
- B. 3:25 pm
- C. 3:30 pm
- D. 3:35 pm

Answer: B

KillTest.com was founded in 2006. The safer,easier way to help you pass any IT Certification exams . We provide high quality IT Certification exams practice questions and answers(Q&A). Especially [Adobe](#), [Apple](#), [Citrix](#), [Comptia](#), [EMC](#), [HP](#), [HuaWei](#), [LPI](#), [Nortel](#), [Oracle](#), [SUN](#), [Vmware](#) and so on. And help you pass any IT Certification exams at the first try.

You can reach us at any of the email addresses listed below.
